You need to print this 4 times. Position the extruded sides to the outside where the screws for the drawer mechanism are. It's a perfect fit but a bit of superglue won't hurt.

The Grid is **14x10** and up to **8 height** on the smaller drawer and **10 height** on the larger bottom ones.

The side clearance is enough so you won't touch the side screws with any normal size drawer.

The last 3 grids on the back are not easy to reach and not reachable from the top so I suggest using them for "deep storage".

The Printable file is designed for a **Voron with a 350mm Baseplate**. If you need it cut in a different way for smaller Baseplates let me know.
