

Thin layers scraper (tiny+ergonomic)

SH

[VIEW IN BROWSER](#)

updated 1. 5. 2023 | published 1. 5. 2023

Summary

Round shape is by far the best for removing thin layers with minimal filament consumption. This one is ergonomic.

0.55 hrs

2 pcs

0.20 mm

0.40 mm

PLA

4 g

UPDATE 3.1.2023:

- added V2 version with different inner shaping → same external size & characteristics, quicker print

Info:

- round edge → longer edge → scraper lasts longer then other spatula types scrapers
 - if it is less sharp on one side, you can just use the other side
- **ergonomic pleasant holding**
- **easier pressing against the plate** (comparing to spatula type scrapers)
 - with spatula it is hard to press on one segment of the edge, with round shape it is easy
- **much smaller filament consumption** (comparing to spatula type scrapers)
- **with hole, so it can be hanged**

With this you will remove every thin layer super-easily!

Quick review in a video from JanTec:

TIP: If the handle part is too low for you → you can try **TALL edition** of this model: <https://www.printables.com/model/341401-round-scraper-tall-edition>

Print info:

- material:
 - PLA or anything hard (but people are using PETG as well)
- layers:
 - a lot of people just use 0.2mm and are happy with it

- but you can use variable layer height for finer results (down to 0.07mm where needed -bottom and top part) → see 3mf/gcode example
- TIP: use skirt of 1 layer height for immediate test :)

How to remove it from the plate after printing:

- metal removable plate:
 - just take the plate away from printer and bend it - model will be removed by itself
- glass plate (non removable):
 - well you may have little problem, people are solving it by putting some tool in the hole in the print (like a wrench) and by some force they pull it off

Inspiration:

- i was using for a long time this rounded **scraper** from BaGoon
 - I was happy with it, because given shape is by far the best for removing any thin layer of printed object
 - BUT it was uncomfortable to hold it, sometimes even painful (too small sharp holds)

Happy scraping!
