Summary

Small bowls to sort and organize your items using the Gridfinity system.

[Hobby & Makers](#) > [Organizers](#)

Tags: [bowl](#) [deskorganizer](#) [gridfinity](#)

These modules are based on [Gridfinity by Zack Freedman](#). They are great for sorting small hardware like screws, bolts, nuts, etc., or your EDC. Each module in this project is 3U tall and fits perfectly on [2x4 Gridfinity frames](#).

I printed the modules in Jessie PLA at a .25mm layer height and 15% infill with a .4mm nozzle.

The modules included in this project are:

- **1x1, 1x2, 1x4, 2x2**

All modules are 3U tall. The depths of the bowls vary by size based on my testing. YMMV.

Additional accessories:

- [*Rubber bumper pads for feet of baseplates](#)
 - These bumper pads are perfect for the feet of the baseplates. They have enough grip that I didn't need to add magnets or weights to my baseplates to keep the bases in place during everyday use.
