Tags: [design](#) [indoorplanter](#) [plant](#) [planter](#) [flowerpot](#)
[houseplants](#) [planterpot](#) [planters](#) [plantpot](#) [vasemode](#)

A small flower pot designed to be printed in "vase mode." Due to this, it prints faster and with better quality, especially on budget 3D printers.

If printed in vase mode, the pot is not watertight. If you want a watertight pot, consider applying the following settings:

- 0% infill
- 3-5 Perimeters
- 3-5 bottom layers
- 0 top layers

If you want to print a bigger version, check out this model: <https://www.printables.com/de/model/221736-geometric-planter-1>

I also made a lampshade with a similar design <https://www.printables.com/de/model/221829-geometric-spiral-lampshade-2>

Changelog:

- 07.2022 Version 2 with flat bottom

Don't have a printer and would like to have this model printed for you?
