Summary

Gridfinity 1x5x6 bin for forks and spoons. Designed to firmly hold the items, but be easy to grab them.

Tags: [gridfinity](#)

1x5x6 sized Gridfinity holder for utensils like forks and spoons. The "handle" portion of the model is not full height, which was the best solution for making it easy to grab the utensils themselves. You can still stack on top of the "business" end, but won't be able to stack over the handles. And, of course, this can stack on other Gridfinity models. Has holes for magnets or screws, though I've not found them necessary.

I've tried this with various different forks and spoons from multiple manufacturers and found it to work with everything that I tried. However, if your utensils have a very wide neck, oddly shaped handle, etc., then you may have fitment issues. Fits a head width of 37mm and neck width of 8.5mm.
