

Gridfinity - Enhanced Vase Bins wth Labels (90 models)

cyron52

[VIEW IN BROWSER](#)

updated 9. 6. 2023 | published 9. 6. 2023

Summary

Easy to print, minimal filament, structurally sound Gridfinity organizer bins with flaps for labels

[Hobby & Makers](#) > [Organizers](#)

Tags: [bin](#) [gridfinity](#) [organizer](#) [vasemode](#)

Updates

- 2023-06-09 - Fixed the 1x3x6u, 7u, and 8u bins. The stabilizer "X" were done wrong. Replaced the 1x5x7u model to the correct one.
- 2023-02-04 - Updated to the [Gridfinity v5 spec](#) which changes the bin height slightly. I'm leaving the v4 STLs available as a zip file.
- 2023-01-11 - Added 1x5, 2x5, 3x5, 4x5, and 5x5 bins for all bin heights as well as bases.
- 2023-01-02 - Added 2u and 8u bins by request.

- [Divided Vase Bins \(no label flaps\)](#)

Description

These minimal filament bins will give you plenty of organizing space for very little filament. A 1x1 grid, 6u bin will use just 10.6g of filament, while a 4x4 is just 120g.

- 90 vase mode bin models
- Sizes from 1x1 up to 5x5
- Heights from 3u up to 8u (6u is standard)
- 15 matching bases

These bins are based on [the excellent design](#) by [Francesco Iannone](#). I've made a couple of significant enhancements to the design.

1. The bases now have magnets holes
2. The bases have been reoriented to print top-down which makes the top and magnet holes very clean
3. X pattern structural supports have been added to the vase mode bins which significantly increase the rigidity and strength of the bin walls. This was inspired by [a design](#) by [braden.eliason](#).

Basics

Print the bins in 2 parts: base and the top (bin). Glue the pieces together for a very simple, bin.

Recommended slicer settings

Bins

- Vase mode
- Bottom layers: 4
- .4mm nozzle
 - Wall thickness: .8mm
 - Layer height:
 - .2mm below the label flap
 - .12mm for the label flap and upper lip
- .6mm nozzle
 - Wall thickness: 1.2mm
 - Layer height:
 - .28mm below the label flap
 - .2mm for the label flap and upper lip

Base

Print in the top-down orientation found in the STL file. This will give you a very clean top and clean magnet holes.

- $\leq 15\%$ infill

TIPS

- **Faster Bases:** [Adrian-CrimsonAzure](#) pointed out that for larger bins, you can get away with printing 1x1 bases and then glue them to just the corners of your larger bins. For a 4x4 this means printing just 4 1x1 bases rather than 16 base grid. If you're short on filament or time, this is a great option.
- **Top Stability:** To make the label flap and bin lip more stable, try printing the top of the model (from where the label lip starts to the top) at a shorter layer height than the rest of the model. I go from .2 mm to .12 mm with a .4 mm nozzle. Thanks to [kevman](#) for this suggestion.
 - PrusaSlicer/SuperSlicer - Use the [height range modifier](#) to make this adjustment.
 - Cura - Try enabling [Adaptive Layer Height](#) to high quality
