Summary

Chips recreated / Remixed from LeeMcFeathers original design to include proper labels on the chips

[Hobby & Makers](#) > [Tools](#)

Tags: [tool](#) [gauge](#) [measuring](#) [fillet](#) [gridfinity](#)

This is a remix of LeeMcFeathers's Gridfinity Radius/Fillet Gauge Blocks and Holder—the remix fixes LeeMcFeathers's original design by adding labels to the chips. The provided STL files are ready to print, and the STEP models are also included.

Fusion 360 source files are also available if you wish to modify the radius values with instructions below

Create Custom Radii

Customizing Radii and Labels with ParametricText

Install ParametricText

Download and install **ParametricText** from the Autodesk® App Store under Fusion → **ParametricText** [Autodesk App Store](#).

Edit the Radius Parameter

Go to **Design** → **Solid** → **Modify** → **Change Parameters** to launch the Parameters window.

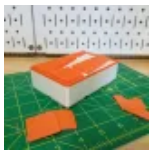

Locate the **Radius** user parameter, edit its **Expression** (e.g. 10 mm), and click **OK**.

Rebuild and View Updates

If **Run Compute All automatically** is enabled in ParametricText's settings, the add-in will regenerate your sketch text immediately. Otherwise, reopen **Change Text Parameters** and click **Update** to refresh labels.

With ParametricText driving the on-model labels, changing the Radius parameter instantly updates both geometry and text for customize gauge sizes as needed.

This remix is based on

Gridfinity Radius/Fillet Gauge Blocks and Holder.
